VISIVAULT ANALYTICS

Demonstration guide

A 20-minute walkthrough of the Prairie Auto Care Analytics dashboard

⚠ **Developed by VisiVault Analytics Ltd. — Synthetic demonstration data. Not actual Ultimate Car Care Group records.**

Developed by VisiVault Analytics Ltd. · October 2026 · Demo guide

Prairie Auto Care Group is a FICTIONAL multi-location Calgary collision repair and car care business. Its business model (three Calgary locations with distinct roles, published hours, service menu, OEM-certified collision work, direct billing of insurers) is inspired by a public Calgary auto care group's website (retrieved 2026-10-09); every repair order, cost, technician, insurer, customer and financial figure is synthetic. No relationship with or endorsement by any real company is implied.

Before the meeting

- Open **prairie-auto-care-bi.streamlit.app** (or run locally: `streamlit run dashboard/app.py`).
- Say clearly: fictional business, synthetic data, inspired only by the public business model of a Calgary auto care group.

Walkthrough

Page	What to show
Executive Overview	Start with TTM revenue, EBITDA and the SE Concierge ramp; read the key findings (parts waiting 9.5 days).
Repair Job Profitability	Show where each revenue dollar goes by line; open the unprofitable-RO list; use the job calculator (efficiency, parts cost, price).
Technician Productivity	Explain the three definitions; show the mix-adjusted comparison table and why there is no league table.
Repair Cycle Times	Filter to moderate collision with supplements; show the bottleneck chart and the delayed-repairs list; estimated completion dates.
Parts Inventory & Supplier Performance	Stocked vs special-order; tire-season stockouts; reorder recommendations; supplier on-time and lead times.
Insurance Claims	Approval and payment days by (fictional) insurer category; receivables ageing; admin workload.
Branch Comparison	Interbranch eliminations and allocations; SE start-up losses; drill into a branch P&L.
Financial statements & ratios	Statements reconcile; WIP and insurer receivables in the balance sheet; cash bridge.
Forecasting & Scenario Simulator	Show demand vs capacity; move technician efficiency +10% and note revenue barely moves - then add appointment volume.
Excel model	Open Prairie_Auto_Care_Integrated_Financial_Model.xlsx, change Assumptions!C4 to Optimistic and show the Checks sheet staying TRUE.

Close

Propose the 90-day pilot (job profitability, technician productivity, cycle time, branch financial performance) with read-only data access.
